EXTRA CENSUS BULLETIN.

No. 97.

WASHINGTON, D. C.

November 1, 1894.

STATISTICS OF FOREIGN PARENTAGE.

NUMBER OF PERSONS HAVING ONE OR BOTH PARENTS FOREIGN BORN: 1870 TO 1890.

DEPARTMENT OF THE INTERIOR,

CENSUS OFFICE,

WASHINGTON, D. C., October 20, 1894.

SIR:

I have the honor to transmit herewith the essential results of the Eleventh Census regarding foreign parentage.

Since 1850 the foreign born population has been classified according to country of birth at each decennial census of the United States. Until the census of 1870, however, no effort was made to determine the proportion of the total population of foreign parentage, that is, the number of persons, whether themselves of native or foreign birth, who had either one or both parents foreign born. As a result of the compilations made in 1870 it was ascertained that the whole number of persons of foreign parentage was 10,892,015, and that they constituted 28.25 per cent of the total population at that census. The whole number of persons in 1870 who were themselves of foreign birth was 5,567,229, very nearly all of whom were of foreign parentage, that is, with the exception of a very small number whose parents were both native born, the exact number not being stated.

No information was afforded by the census of 1870, however, as to the extent to which each of the principal foreign countries had contributed to that element of the population who were of native birth but who had one or both parents foreign born, so that in compiling the census of 1880 an elaborate tabulation, as stated in the Tenth Census report, was undertaken in order to ascertain the proportions contributed to the whole element of foreign parentage by each of the following nationalities: Ireland, Germany, Great Britain, Scandinavia, British America, and "Other countries". This tabulation was completed for 36 states and territories, including the District of Columbia, and the ratios derived therefrom, that is, the number of persons having fathers and mothers born in each of the above named countries to each 1,000 persons born in the same country, were applied to the whole number of persons of each of these nationalities in the United States, in order to determine, approximately at least, the number of persons, both native born and foreign born, in the United States in 1880 who had fathers and mothers born as stated, and indirectly the whole number of persons of foreign parentage. Whether or not these ratios, derived from partial tabulations only, produced substantially accurate results for the whole country can not be definitely determined, except by completing the tabulation for the states not tallied in 1880, which included, besides the territory of Utah, some of the largest states in point of population, and which contained the largest proportions of the foreign born population, viz, New York, New Jersey, Pennsylvania, Ohio, Indiana, Illinois, Michigan, Iowa, Kansas, and Maine.

Assuming that the results are approximately correct, it appears that out of a total population in 1880 of 50,155,783, there were 14,922,744, or 29.75 per cent, who had either one or both parents born in foreign countries.

In the 36 states and territories for which the tabulations were completed, the whole number having either one or both parents foreign born was 5,758,811, or 21.85 per cent of the total population (26,354,124) of the states and

territories considered. In these states and territories there were 2,673,217 persons of foreign birth, or 40.02 per cent only of all the foreign born in the United States in 1880, of which number 13,307 were of native parentage, that is, although of foreign birth themselves their parents were both native born. The whole number of persons of foreign birth who were of foreign parentage, that is, who had either one or both parents foreign born, in these 36 states and territories was 2,659,910, leaving 3,098,901 persons who were of native birth but of foreign parentage. In the United States as a whole the foreign born persons in 1880 numbered 6,679,943 and the foreign born persons of native parentage were estimated to be 33,252. The whole number of foreign born persons of foreign parentage in the United States in 1880, therefore, was, approximately, 6,646,691, while the whole number of native born persons of foreign parentage was, approximately, 8,276,053.

In 1890 the tabulations regarding foreign parentage comprehended for white persons not only Ireland and Germany, which were the only countries separately tabulated in 1880, but also each of the countries comprising the nationality groups used in 1880, as England, Scotland, and Wales instead of Great Britain; Sweden, Norway, and Denmark instead of Scandinavia; a separation according to French and English extraction for Canada and Newfoundland, besides giving in addition thereto those countries from which more recent contributions of noticeable proportions have been received, particularly during the past decade, as Bohemia, Hungary, France, Italy, and Russia. The colored population in 1890 was only tabulated as regards the number who were either of native or foreign parentage.

Considering first the results arrived at in 1890 in a general way, it appears that the whole number of persons of foreign parentage, without regard to color, was 20,676,046, or 33.02 per cent of the total population, which in 1890 was 62,622,250. The whole number of white persons of foreign parentage in 1890 was 20,519,643 while the colored persons of foreign parentage numbered 156,403. The foreign white in 1890 numbered 9,121,867, of which 105,899, or 1.16 per cent, were of native parentage, that is, had both parents native born. The whole number of foreign white persons of foreign parentage in 1890 was, therefore, 9,015,968, leaving 11,503,675 native white persons of foreign parentage. The number of foreign colored who were of native parentage was not separately tabulated in 1890.

The table on the following page gives the total population together with the number and percentage of persons of foreign parentage by states and territories for 1870 and 1890 in detail, and for the 36 states and territories in 1880 for which foreign parentage figures were compiled.

a Estimated. Foreign parentage in 1880 was tabulated for only 36 states and territories.

b Not compiled in 1880.

Dakota territory.

The proportion of persons of foreign parentage to the total population, as shown by the preceding table, has steadily increased from 1870 to 1890 in all the states of the North Atlantic division, the largest increases in the proportion being in New Hampshire, Rhode Island, Massachusetts, and Connecticut. This is also true as regards the states of the North Central division, with the single exception of Missouri. The largest increases in the proportion in this division are found in North Dakota, South Dakota, Michigan, Minnesota, Illinois, and Iowa.

In the South Atlantic division the proportion has increased materially in Florida and but slightly in Delaware, Maryland, Virginia, and North Carolina. In all the other states of this division there is a less proportion of persons of foreign parentage to the total population in 1890 than in 1870, the largest decreases being in the District of Columbia and West Virginia. In the South Central division there has been a perceptible increase in the proportion of persons of foreign parentage in 1890 as compared with 1870 in Texas and Arkansas, a very slight increase in Alabama and Tennessee, and a decrease in Louisiana, Kentucky, and Mississippi, the loss in Louisiana being particularly noticeable.

In the Western division the proportion of persons of foreign parentage has increased from 1870 to 1890 in Colorado, Oregon, Washington, New Mexico, and Montana. In Colorado and Oregon the increase was mainly from 1870 to 1880, while in the remaining states the increase has been almost wholly since 1880. There has been a loss in the other states and territories in this division, the decrease in the proportion being especially noticeable in Idaho, Arizona, and Wyoming.

Considering the proportion of persons of foreign parentage to total population in the several states and territories in 1890, it is seen that the largest proportions were 78.98 per cent in North Dakota and 75.42 per cent in Minnesota, or, in other words, more than three-fourths of the entire population of those two states in 1890 were of foreign extraction. In Wisconsin the element of foreign extraction constituted very nearly three-fourths of the total population, or 73.69 per cent, and in Utah very nearly two-thirds of the population, or 66.28 per cent. In South Dakota the persons of foreign parentage constituted a trifle over 60 per cent, while in Nevada, Rhode Island, California, New York, Massachusetts, Montana, Arizona, Michigan, and Connecticut they constituted between 50 and 60 per cent of the total population. In Illinois, New Jersey, and Wyoming they constituted very nearly 50 per cent. North Carolina had the smallest proportion of persons of foreign parentage, or seven-tenths of 1 per cent only, and was closely followed by South Carolina with 1.53 per cent and Georgia with 1.78 per cent. In Mississippi, Alabama, and Virginia less than 3 per cent of the total population were of foreign parentage, while in Tennessee and Arkansas there was a trifle more than 3 per cent.

In the North Atlantic, North Central, and Western divisions more than two-fifths of the population in 1890 were of foreign parentage, the percentages being 47.21, 43.02, and 48.67, respectively. The smallest percentages in these three divisions were 22.87 in Maine, 20.40 in Indiana, and 15.44 in New Mexico. In the South Atlantic division but 6.02 per cent of the population were of foreign parentage, the largest percentages being found in Delaware, Maryland, and the District of Columbia. In the South Central division only 7.59 per cent were of foreign parentage, the largest percentages being found in Louisiana, Texas, and Oklahoma.

The relative proportions of white and colored persons of native and foreign parentage in the United States in 1890 are summarized as follows:

COLOR.	Total population.	PERSONS OF NATIVE PARENTAGE.		PERSONS OF FOREIGN PARENTAGE.	
		Number.	Per cent.	Number.	Per cent.
All classes.....	62,622,250	41,946,204	66.98	20,676,046	33.02
Total white.....	54,983,890	31,464,247	62.68	20,519,643	37.32
Native white.....	45,862,028	34,358,348	74.92	11,503,675	25.08
Foreign white.....	9,121,867	105,899	1.16	9,015,968	98.84
Total colored.....	7,638,360	7,481,957	97.95	156,403	2.05

As already stated, the term "foreign parentage" includes all persons, whether themselves of native or foreign birth, who had either one or both parents foreign born. The term "native parentage", on the other hand, includes all persons, irrespective of birth, who had either both parents native born, one parent native born and one parent for whom the birthplace was "unknown", or for whom the birthplace of both parents was "unknown". The chief point being to determine the number having one or both parents foreign born, that is, the purely foreign element and its proportion to the entire population, all other persons have been considered, for convenience, as being of native parentage.

For this reason, and because of the small proportion of the whole population for whom the birthplace of both parents was "unknown", it was not deemed necessary to present the unknown element separately. Of the whole number of native white persons included as of native parentage, less than 3 per cent had both parents "unknown", as shown by the following statement:

PARENTAGE.	Number.	Per cent.
Native white persons of native parentage	34,358,348	100.00
Both parents native.....	32,945,946	95.89
Father native, mother unknown.....	174,996	0.51
Father unknown, mother native.....	257,641	0.75
Both parents unknown.....	979,765	2.85

As compared with the whole population (62,622,250), the percentage is of no significance whatever, assuming that among the colored of native parentage there were practically none of "unknown" parentage.

Among the foreign white there has been found a small percentage (1.16) of persons of either native or unknown parentage, or 105,899 out of a total of 9,121,867 foreign white persons. Of this number, 67,869, or 64.09 per cent, had both parents unknown, while the remaining 38,030, or 35.91 per cent, had either both parents native or one parent native and one parent unknown. This last named element, constituting a little more than one-third of the whole number of foreign white persons of native parentage, should be really considered as native born and should have been returned as "American citizens born abroad". This was not done to any extent by the enumerators, although they were specially instructed on this point, as only 8,547 persons were so returned and included under the heading of "Native born". The number erroneously reported is comparatively small and has no particular bearing on the question of foreign parentage.

The entire element of foreign parentage in 1890 was, therefore, 20,676,046, or 33.02 per cent of the total population, made up of 20,519,643 white persons, or 37.32 per cent of all the white, and 156,403 colored persons, or 2.05 per cent of all the colored. The white population of foreign parentage is further subdivided according to native white and foreign white, there being 11,503,675 native white persons of foreign parentage and 9,015,968 foreign white persons of foreign parentage.

The population of the United States in 1890 subdivided as white and colored and distributed according to native and foreign parentage, giving in each case the percentage of the total population, is summarized as follows:

PARENTAGE.	Number.	Per cent.
Total population	62,622,250	100.00
Of native parentage.....	41,946,201	66.98
Of foreign parentage.....	20,676,046	33.02
Total white population.....	54,983,890	87.80
Of native parentage.....	34,464,247	55.03
Of foreign parentage.....	20,519,643	32.77
Total colored population.....	7,638,360	12.20
Of native parentage.....	7,481,937	11.95
Of foreign parentage.....	156,403	0.25

White persons of foreign parentage in 1890 constituted 32.77 per cent of the total population, while colored persons of foreign parentage constituted but 0.25 per cent, the whole element of foreign parentage constituting, as before stated, 33.02 per cent.

The table on the following page shows the number and percentage of persons of foreign parentage among the white and colored population of each state and territory in 1890.

STATISTICS OF POPULATION.

a Persons of negro descent, Chinese, Japanese, and civilized Indians.

The percentages of persons of foreign parentage among the white population do not differ materially from those already shown for the whole population irrespective of color, except for a few states only. This is particularly the case in the North Atlantic, North Central, and Western divisions. In the South Atlantic and South Central divisions, however, the proportions of white persons of foreign parentage are somewhat increased, especially in the District of Columbia, Maryland, Florida, Delaware, Louisiana, Texas, and Mississippi.

Among the colored population, which includes persons of negro descent, Chinese, Japanese, and civilized Indians, the percentage of persons of foreign parentage was quite large in certain states, although for the United States as a whole they constituted only 2.05 per cent of the colored. This is especially true in the Western division, with the exception of New Mexico, and in several of the states along the Canadian border. These large percentages are principally due in the Western division to the large number of Chinese, and in the border states to the presence of civilized Indians and persons of negro descent who have come from Canada.

The element of foreign parentage among the white population has been distributed, as already stated, according to the principal nationalities of the parents. This was not done for the colored, as colored persons of foreign parentage constituted but 2.05 per cent of all the colored, and because, in conformity to the classification of countries used for the white element of foreign parentage, the nationality of the parents for fully 95 per cent could not be specifically stated, but would be included under the heading of "Other countries". For these reasons no tabulation regarding the colored population was considered necessary beyond a general statement of the number having either native or foreign parentage, as already defined.

Considering the element of foreign parentage among the white population in greater detail, the following table is obtained :

PARENTAGE.	WHITE PERSONS OF FOREIGN PARENTAGE.		NATIVE WHITE PERSONS OF FOREIGN PARENTAGE.		FOREIGN WHITE PERSONS OF FOREIGN PARENTAGE.	
	Number.	Per cent.	Number.	Per cent.	Number.	Per cent.
The United States.....	20,519,643	100.00	11,503,675	100.00	9,015,968	100.00
Both parents foreign.....	17,011,781	82.90	8,085,019	70.28	8,926,762	99.01
Father foreign, mother native.....	2,424,693	11.82	2,378,729	20.68	45,961	0.51
Father native, mother foreign.....	1,083,169	5.28	1,039,927	9.04	43,242	0.48

Of the total white persons of foreign parentage, 17,011,781, or 82.90 per cent, had both parents foreign born, leaving 3,507,862, or 17.10 per cent, with one parent foreign and one parent native. Among the native white those having both parents foreign constituted 70.28 per cent, while among the foreign white all but 1 per cent had both parents foreign. Of the total white persons with but one parent foreign, 2,424,693, or 11.82 per cent of all white persons of foreign parentage, had a foreign father and a native mother, and 1,083,169, or 5.28 per cent of all white persons of foreign parentage, had a foreign mother and a native father.

Of the whole number of white persons of foreign parentage in 1890 who had both parents foreign born, 16,089,513, or 78.41 per cent of all the white persons of foreign parentage, had both parents born in the same country, leaving only 922,268, or 4.49 per cent of the whole number of white persons of foreign parentage, who were of mixed foreign parentage, that is, father born in Ireland and mother born in England, father born in England and mother born in Ireland, father born in Germany and mother born in France, and so on. The figures in detail for the native white and foreign white are as follows :

PARENTAGE.	WHITE PERSONS OF FOREIGN PARENTAGE.		NATIVE WHITE PERSONS OF FOREIGN PARENTAGE.		FOREIGN WHITE PERSONS OF FOREIGN PARENTAGE.	
	Number.	Per cent.	Number.	Per cent.	Number.	Per cent.
The United States.....	20,519,643	100.00	11,503,675	100.00	9,015,968	100.00
Both parents born in same country.....	16,089,513	78.41	7,370,749	64.07	8,718,764	96.70
Of mixed foreign parentage.....	922,268	4.49	714,270	6.21	207,998	2.31
One parent foreign, one parent native.....	3,507,862	17.10	3,418,656	29.72	89,206	0.99

As already stated, the whole number of white persons of foreign parentage in 1890 constituted 32.77 per cent of the entire population of the United States. The table on the following page shows the number of native and foreign white persons of foreign parentage in each state and territory in 1890, together with the percentage of the total population in each case.

STATISTICS OF POPULATION.

In the United States as a whole, the native white persons of foreign parentage in 1890 numbered 11,503,675 and constituted 18.37 per cent of the total population, while the foreign white persons of foreign parentage numbered 9,015,968 and constituted 14.40 per cent, the whole number of white persons of foreign parentage being, as before stated, 20,519,643, or 32.77 per cent of the total population.

In the North Atlantic division the whole number of white persons of foreign parentage constituted 47.10 per cent of the total population in 1890, the native white persons of foreign parentage constituting 25.03 per cent and the foreign white persons of foreign parentage 22.07 per cent. In Maine, New Hampshire, Massachusetts, and Rhode Island the foreign white persons of foreign parentage constituted a larger percentage of the total population than the native white persons of foreign parentage, the largest difference being in New Hampshire, where the percentage for the native white persons was 13.28, as against 18.88 for foreign white persons. This excess is caused by the fact that, as compared with the other states in this division, these states have received a larger proportion of the immigration which came to this country during the last years of the decade from 1880 to 1890, particularly the French Canadian element. In all the other states of this division the native white element of foreign parentage exceeded the foreign white population of foreign parentage, showing that the effect of the great influx of foreign blood into this country in recent years has not been so marked as in the more easterly states.

In the North Central division 25.08 per cent of the total population in 1890 consisted of native white persons of foreign parentage as compared with 17.89 per cent of foreign white persons of foreign parentage, the entire element, both native white and foreign white, of foreign parentage constituting 42.97 per cent of the total population. In all the states of this division, with the single exception of North Dakota, the proportion of native white persons of foreign parentage to the total population in 1890 was larger than the proportion of foreign white persons of foreign parentage. In North Dakota, however, the native white element of foreign extraction constituted 34.67 per cent of the total population, while the foreign white element of foreign parentage constituted 44.20 per cent.

In the Western division the white persons of foreign parentage constituted 45.27 per cent of the total population, the native white element of foreign parentage constituting 23.44 per cent and the foreign white element of foreign parentage 21.83 per cent. In Montana, Arizona, and Washington the proportions of foreign white persons of foreign parentage were considerably more than those of native white persons of foreign parentage, while in Wyoming, Colorado, and Oregon the proportions were relatively the same. In the remaining states and territories the reverse was true, especially in Utah and Idaho.

In the states comprising the South Atlantic and South Central divisions, with the single exception of Florida, there was an excess in the proportion of native white persons of foreign parentage as compared with foreign white persons of foreign parentage. In the South Atlantic division the native white persons of foreign parentage in 1890 constituted 3.64 per cent of the total population and the foreign white persons of foreign parentage 2.25 per cent. In the South Central division 4.62 per cent of the total population were native white persons of foreign parentage and 2.86 per cent foreign white persons of foreign parentage.

The presence of native and foreign white persons of foreign extraction in the 124 principal cities of the United States, in proportion to the total population, is shown in the table on the following page.

NUMBER OF TOTAL, WHITE, NATIVE WHITE, AND FOREIGN WHITE PERSONS OF FOREIGN PARENTAGE, AND PERCENTAGE OF TOTAL POPULATION, FOR CITIES HAVING 25,000 INHABITANTS OR MORE: 1890.

In New York city and in Chicago practically four-fifths of the total population in 1890 were of foreign parentage, the exact percentages being 80.46 for New York and 77.90 for Chicago. Of the other cities having a population of 400,000 or more, the percentages were 56.58 for Philadelphia, 71.04 for Brooklyn, 67.46 for St. Louis, 67.96 for Boston, and 41.67 for Baltimore. Of all the cities considered, the largest percentage was found in Milwaukee, Wis., where 86.36 per cent of its population in 1890 was of foreign parentage. The next largest percentages were found in Holyoke and Fall River, in Massachusetts, where 82.98 per cent and 82.71 per cent, respectively, were of foreign parentage. Lawrence, in the same state, had also 79.88 per cent of foreign parentage. Hoboken, in New Jersey, had 81.46 per cent of its population of foreign parentage, and Long Island city, in New York, 80.62 per cent, or practically the same as for New York city. Other cities which had at least 75 per cent of their population of foreign parentage in 1890 were San Francisco, in California, with 78.15 per cent; Detroit and Bay city, in Michigan, with 77.17 per cent and 76.20 per cent, respectively; Buffalo, in New York, with 77.11 per cent; Scranton, in Pennsylvania, with 75.23 per cent; Duluth and St. Paul, in Minnesota, with 75.21 per cent and 75.14 per cent, respectively, and Cleveland, in Ohio, with 74.98 per cent.

Classifying native and foreign white persons of foreign parentage according to the number either having both parents born as specified, having one parent so born and one parent native, or who were of mixed foreign parentage, the table on the following page is obtained.

STATISTICS OF POPULATION.

SPECIFIED COUNTRIES.	WHITE PERSONS OF FOREIGN PARENTAGE.			NATIVE WHITE PERSONS OF FOREIGN PARENTAGE.			FOREIGN WHITE PERSONS OF FOREIGN PARENTAGE.		
	Total.	Having both parents born as specified.	Having one parent born as specified and one parent native.	Total.	Having both parents born as specified.	Having one parent born as specified and one parent native.	Total.	Having both parents born as specified.	Having one parent born as specified and one parent native.

Taking the whole number of white persons of foreign parentage and classifying them according to the nationality of the parents, the following table of percentages is obtained, showing the percentage of the whole number of white persons having one or both parents born as specified, and, in addition, the percentage of the whole number represented by those having both parents so born and those having one parent so born and one parent native :

SPECIFIED COUNTRIES.	WHITE PERSONS OF FOREIGN PARENTAGE.		
	Total.	Having both parents born as specified.	Having one parent born as specified and one parent native.
All classes.....	100.00	82.90	17.10
Ireland.....	23.94	20.18	3.76
Germany.....	33.39	28.15	5.24
England.....	9.37	6.48	2.89
Scotland.....	2.64	1.92	0.72
Wales.....	1.07	0.83	0.24
Canada (English).....	4.58	2.45	2.13
Canada (French).....	2.50	2.15	0.35
Sweden.....	3.51	3.36	0.18
Norway.....	2.91	2.68	0.23
Denmark.....	1.04	0.95	0.09
Bohemia.....	1.05	1.00	0.05
France.....	1.25	0.87	0.38
Hungary.....	0.35	0.34	0.01
Italy.....	1.21	1.15	0.06
Russia.....	1.24	1.21	0.03
Other countries.....	5.43	4.69	0.74
Of mixed foreign parentage.....	4.49	4.49

From these two tables it is seen that the white persons in 1890 who had both parents born in Germany numbered 5,776,186, or 28.15 per cent of the whole number of white persons of foreign parentage, and those who had one parent born in Germany and one parent native 1,075,378, or 5.24 per cent, these two classes combined numbering 6,851,564 and constituting 33.39 per cent. The whole number of white persons who had both

parents born in Ireland was 4,142,199, or 20.18 per cent, and those who had one parent so born and one parent native 771,039, or 3.76 per cent, making a combined total of 4,913,238, or 23.94 per cent. Taken together, white persons of German and Irish parentage, as just defined, constituted in 1890 considerably more than one-half of all white persons of foreign parentage. White persons of English parentage numbered 1,922,638, or 9.37 per cent of all white persons of foreign parentage, those having both parents born in England numbering 1,330,123 and constituting 6.48 per cent, and those having one parent born in England and one parent native, 592 515, or 2.89 per cent; including those of Scotch and Welsh extraction, the entire element of British parentage constituted 13.08 per cent. Of the remaining nationalities, white persons of British American parentage, combining those of English Canadian and French Canadian extraction, constituted 7.08 per cent, and those of Scandinavian parentage, including Denmark, 7.49 per cent. White persons of Bohemian, French, Italian, and Russian parentage constituted, in each case, a little more than 1 per cent, while those of Hungarian parentage constituted a little more than one-third of 1 per cent. Those having one or both parents born in other countries not specified constituted 5.43 per cent, and, as previously stated, those of mixed foreign parentage 4.49 per cent.

The following table shows the percentages of white persons having both parents born as specified or having one parent born as specified and one parent native :

WHITE PERSONS OF FOREIGN PARENTAGE.			WHITE PERSONS OF FOREIGN PARENTAGE.		
SPECIFIED COUNTRIES.	Having both parents born as specified.	Having one parent born as specified and one parent native.	SPECIFIED COUNTRIES.	Having both parents born as specified.	Having one parent born as specified and one parent native.
	<i>Per cent.</i>	<i>Per cent.</i>		<i>Per cent.</i>	<i>Per cent.</i>
Ireland.....	84.31	15.69	Norway.....	92.30	7.70
Germany.....	84.30	15.70	Denmark.....	91.28	8.72
England.....	69.18	30.82	Bohemia.....	95.29	4.71
Scotland.....	72.70	27.30	France.....	69.28	30.72
Wales.....	77.01	22.99	Hungary.....	97.54	2.46
Canada (English).....	53.55	46.45	Italy.....	91.93	5.07
Canada (French).....	86.10	13.90	Russia.....	97.46	2.54
Sweden.....	95.04	4.96	Other countries.....	86.29	13.71

White persons of English Canadian parentage had in 1890 the smallest percentage of both parents born as specified, or a little more than one-half, and were followed by those of English and of French parentage, or a little more than two-thirds in each case.

The whole number of white persons of foreign parentage in 1890 constituted, as has been previously stated, 32.77 per cent of the total population. The following table shows the proportion of the total population represented by each class of persons of foreign extraction, when considered according to the nationality of their parents :

SPECIFIED COUNTRIES.	Per cent of total population.	SPECIFIED COUNTRIES.	Per cent of total population.
All classes.....	32.77	Norway.....	0.95
Ireland.....	7.85	Denmark.....	0.34
Germany.....	10.94	Bohemia.....	0.34
England.....	3.07	France.....	0.41
Scotland.....	0.86	Hungary.....	0.12
Wales.....	0.35	Italy.....	0.40
Canada (English).....	1.50	Russia.....	0.41
Canada (French).....	0.82	Other countries.....	1.75
Sweden.....	1.16	Of mixed foreign parentage.....	1.47

From this table it is seen that the white persons of German parentage constituted 10.94 per cent of the total population in 1890 and those of Irish parentage 7.85 per cent. White persons of English parentage constituted 3.07 per cent of the entire population, while, if those of Scotch and Welsh parentage are included, those of British parentage constituted 4.28 per cent. White persons of British American parentage constituted 2.32 per cent of the total population and those of Scandinavian parentage 2.45 per cent.

The table on the following page shows for each state and territory the number of white persons in 1890 who had either both parents born as specified or one parent so born and one parent native, or who were of mixed foreign parentage, together with the percentage in each case of all white persons of foreign parentage.

STATISTICS OF POPULATION.

Taking into consideration such states as contained in 1890 a large number of whites of foreign parentage, it is seen that for white persons of Irish parentage the largest proportions were found in the North Atlantic division, where in Massachusetts, Rhode Island, and Connecticut nearly one-half, and in New York, New Jersey, and Pennsylvania a little more than one-third, of all white persons of foreign parentage were of this element. Large proportions were also found in nearly all of the remaining states and territories, particularly in Delaware, where they constituted more than one-half of all whites of foreign parentage, but in many of them, the whole number of white persons of foreign parentage being comparatively small, the proportions are of little moment.

For white persons of German parentage the largest proportions were found in the states of the North Central division, where in Ohio, Indiana, Wisconsin, and Missouri more than one-half of the whole number of white persons of foreign parentage were of this element. In Maryland and Kentucky they constituted more than one-half, and in New York, New Jersey, and Pennsylvania very nearly one-third, of all whites of foreign parentage. Large proportions were also found in some of the other states, but in most of them the foreign element being numerically small, the proportions are not of importance.

It will be noticed that white persons of Irish and German parentage combined constituted more than one-half of all whites of foreign parentage in the country, and that in Ohio and Missouri they constituted nearly three-fourths, and in New York, New Jersey, and Pennsylvania about two-thirds, of the whole number of whites of foreign parentage found living in these states.

White persons of English parentage were found in noticeable proportions throughout the whole country, particularly in Utah, where they constituted 42.77 per cent of all white persons of foreign parentage, this figure exceeding that for the descendants of any other nationality found in that territory.

White persons of Scotch parentage were found in small proportions in nearly all of the states and territories, the largest being those for North Carolina and Wyoming, where they constituted 13.99 and 9.15 per cent, respectively.

For white persons of Welsh parentage the proportions were in all cases small, the largest being found in Pennsylvania and Ohio, where they constituted 4.05 and 2.58 per cent, respectively.

White persons of English and French Canadian extraction were found in the largest proportions in the states immediately adjoining and adjacent to the Canadian line. The largest proportions for those of English Canadian extraction were found in Maine, New Hampshire, Vermont, Massachusetts, Michigan, North Dakota, and Washington, where they ranged from 10.84 per cent in Washington to 29.91 per cent in Maine. The proportions for those of French Canadian extraction were largest in Maine, New Hampshire, Vermont, Massachusetts, and Rhode Island, where they ranged from 11.89 per cent in Massachusetts to 39.40 per cent in New Hampshire. These large proportions, particularly for the latter class, are due to the large manufacturing industries in the eastern states and their contiguity to that part of Canada inhabited by these people, conditions that have induced large numbers of them to emigrate to this country during recent years.

White persons of Scandinavian parentage were found in quite large proportions in most of the states and territories of the North Central and Western divisions. The proportions for the Swedes were largest in Minnesota, Nebraska, Washington, Kansas, Colorado, Utah, and Illinois, where they ranged from 7.04 per cent in Illinois to 15.81 per cent in Minnesota. The proportions for the Norwegians were largest in North Dakota, Minnesota, South Dakota, Wisconsin, Washington, and Iowa, ranging from 7.18 per cent in Iowa to 33.22 per cent in North Dakota. The proportions for the Danes were largest in Utah and Idaho, being 14.43 and 7.31 per cent, respectively.

Of the remaining countries shown in the table, the largest proportion was found for white persons of Bohemian parentage in Nebraska, where it was 6.66 per cent; for white persons of French parentage in Louisiana, where it was 16.42 per cent; for white persons of Hungarian parentage in Pennsylvania, where they comprised but 1.43 per cent of all white persons of foreign parentage in that state; for white persons of Italian parentage in Louisiana, or 8.59 per cent, with less noticeable proportions in Nevada, California, Colorado, New York, and New Jersey; and for white persons of Russian parentage in South Dakota, where they constituted 9.28 per cent, the next largest proportions being found in Kansas, North Dakota, and Oregon.

The table on the following page shows the whole number of white persons of foreign parentage, distributed according to the nationality of the parents, for each of the seven cities that in 1890 had a population of 400,000 or more.

CITIES.	Total white persons of foreign parentage.	WHITE PERSONS HAVING EITHER BOTH PARENTS BORN AS SPECIFIED OR ONE PARENT BORN AS SPECIFIED AND ONE PARENT NATIVE.

Of the large number of white persons of foreign parentage living in these cities in 1890, those of Irish and German extraction constituted by far the greater proportions. In fact, for these two classes combined, the proportions in Baltimore, St. Louis, Philadelphia, Brooklyn, and New York exceeded two thirds, and in Boston and Chicago one-half, of the whole number of white persons of foreign parentage in each of these cities.

For those of Irish extraction the proportions were large in all of these cities. In Boston they constituted more than one-half of all whites of foreign parentage, or 53.39 per cent; in Philadelphia, more than two-fifths, or 44.15 per cent, and in Brooklyn and New York, a little over one-third, or 35.36 and 33.73 per cent, respectively. The smallest proportions for this element were found in St. Louis, Baltimore, and Chicago, in each of which they constituted about one-fifth of all whites of foreign parentage.

The proportions for those of German parentage were also large in all of these cities except Boston, where it was but 7.30 per cent. In Baltimore and St. Louis it was more than one-half, or 61.66 and 59.69 per cent, respectively; in Chicago, 37.35 per cent; in Brooklyn, 36.75 per cent; in New York, 35.04 per cent, and in Philadelphia, 29.29 per cent.

The largest proportions for those of English parentage were found in Philadelphia and Brooklyn, where they constituted about one-tenth of the whole number of whites of foreign parentage. The only proportion for the Canadians of English extraction that is of any moment was found in Boston, where it was 13.10 per cent. The largest proportions for those of Swedish, Norwegian, and Bohemian extraction were found in Chicago, being 7.06 per cent for the Swedes, 3.66 per cent for the Norwegians, and 4.89 per cent for the Bohemians. The largest proportions for those of Italian and Russian extraction were found in New York, being, respectively, 4.52 and 5.68 per cent.

For white persons of Scotch, Welsh, French Canadian, French, and Hungarian parentage, the proportions were in all cases very small.

The table on the following page shows, for the United States as a whole, the distribution of the 922,268 white persons of mixed foreign parentage according to the various combinations of parentage in detail.

In the above table the combinations of parentage are arranged in the order of their numerical importance, and can be easily understood. For instance, in 1890 there were 137,282 white persons who had one parent born in Ireland and one parent born in England, of which 106,846 were native white persons and 30,436 foreign white persons. The other lines are to be read in the same way. In this table, the term "other countries" is used in its limited sense, meaning thereby all other countries not specified, the same as in the general tables showing parentage according to certain specified nationalities.

The number of white persons in 1890 who had either fathers or mothers born in certain specified countries is shown, for the United States as a whole, in the table on the following page.

SPECIFIED COUNTRIES.	Number of white persons having fathers born as specified.	Number of white persons having mothers born as specified.	Excess of white persons having fathers born as specified.	Excess of white persons having mothers born as specified.

a Net excess of white persons having foreign fathers, 1,341,524.

From this table it appears that, with the exception of Canada (English), there was an excess of white persons having fathers born in each specified country over white persons having mothers so born. The excess of white persons having English Canadian mothers over those having English Canadian fathers was practically confined to the North Atlantic and North Central divisions, largely in Massachusetts, New York, and Michigan. The net excess of fathers is 1,341,524, there being 19,436,474 white persons having foreign fathers as compared with 18,094,950 white persons having foreign mothers.

On the other hand, white persons having native mothers and foreign fathers exceeded those having native fathers and foreign mothers to the number of 1,341,524, which offsets the excess of white persons having foreign fathers, as just stated. These figures, although applying directly to the marriage of persons one generation removed, indicate, to a certain extent at least, that native women have intermarried more freely with foreign men than native men with foreign women. To what extent persons of foreign birth had intermarried with persons native born but of the same extraction, as persons of German birth who had married persons born in the United States but of German parentage, can not be determined from the data at hand. In general, however, it may be safely stated that the relatively freer intermarriage of native born women with foreign born men was principally due to the fact that the males in the country were largely in excess, particularly as regards the foreign born, fully three-fifths of all the immigrants being males, who were largely of marriageable age, if not already married, upon their arrival.

This predominance of white persons with native mothers but foreign fathers existed in 1890 in every state and territory of the Union. It was greatest in the South Central division, where there were over three and one-half times as many white persons with native mothers and foreign fathers as there were white persons with native fathers and foreign mothers, and in the South Atlantic division, where there were very nearly three times as many such persons. In these two divisions, however, the element of foreign parentage among the whites was not numerically large, and it was probably due to this fact that the scattered foreign male element had sought marriage so freely with native born women. In the North Central division there were not quite two and one-half times as many white persons with native mothers and foreign fathers as there were white persons with native fathers and foreign mothers, while in the Western division the white persons having native mothers and foreign fathers were just about double the number having native fathers and foreign mothers. The smallest excess was found in the North Atlantic division, or about one and nine-tenths more white persons with native mothers and foreign fathers than white persons with native fathers and foreign mothers.

Taking the nationality of the father as the basis, the intermarriage of mothers born in the United States with fathers born in each of the various foreign countries can be measured relatively, as shown by the table on the following page.

Italy.....	254,555	236,008	92.72	7,210	2.83	11,337	4.45
Russia.....	266,884	248,165	92.99	13,579	5.09	5,140	1.92
Other countries.....	1,140,921	961,325	84.26	69,881	6.12	109,715	9.62

From this table it appears that 10.54 per cent of all the white persons with Irish fathers had mothers born in the United States, as compared with 12.33 per cent for those with German fathers, 20.63 per cent for those with English fathers, 17.09 per cent for those with Scotch fathers, 15.83 per cent for those with Welsh fathers, 29.46 per cent for those with English Canadian fathers, and 21.59 per cent for those with French fathers. It is at once apparent from these percentages that native born women have married most freely with those nationalities which were among the earliest contributors to our foreign born element, and for this reason it is impossible to determine accurately the proportion of these women who are themselves native born but of foreign extraction.

The percentage of persons with French Canadian fathers and native mothers makes this assumption all the more plausible, for the reason that this class is not disposed to marry much, if at all, outside of its own people. There were, however, in 1890 very nearly 9 per cent of persons reported with French Canadian fathers and native mothers, which can be accounted for only on the assumption that the larger share of these native born mothers were themselves of French Canadian extraction. This point is further illustrated by the proportions of persons who had Scandinavian fathers and native mothers, there having been but 3.27 per cent of persons with Swedish fathers and native mothers, 5.10 per cent with Norwegian fathers and native mothers, and 6.10 per cent with Danish fathers and native mothers. The comparatively small proportions of persons who had fathers born in Bohemia, Hungary, Italy, or Russia and native mothers are also noted, these nationalities having only assumed importance during the past decade as a part of our foreign born population.

The table on the following page gives similar results concerning white persons having mothers born in certain specified countries.

Both of these tables point to certain indications but do not afford definite information, for the reasons stated, as to the freedom of intermarriage between foreign born persons and natives of this country. This is also true as regards intermarriage between persons of the various specified nationalities. No conclusive results in this respect can be derived from the figures showing foreign parentage, as they do not give the origin of the persons considered, that is, the stock from which they have sprung. In this connection, however, an attempt has been made to determine for the first time the approximate number of persons in this country who were of French Canadian extraction, so far as it is possible to obtain such information through the medium of the census enumerators. The work of the enumerators was supplemented in this office by a most careful scrutiny of the statements made on the schedules regarding all persons of Canadian birth or parentage, for the purpose of affording as accurate results as possible concerning the French Canadian element of our population. The table on the following page shows the number of persons reported as having been born in Canada and Newfoundland separated according to English or French extraction.

NUMBER OF PERSONS BORN IN CANADA AND NEWFOUNDLAND OF ENGLISH OR FRENCH EXTRACTION: 1890.

This table shows that of the 980,938 persons in 1890 who were born in Canada and Newfoundland, 678,442, or 69.16 per cent, were of English extraction and 302,496, or 30.84 per cent, were of French extraction. Of the whole number of those of French extraction, 229,354, or 75.82 per cent, were found in the North Atlantic division, Massachusetts alone containing 96,286. In certain states of the North Central division also this class was numerous, as shown by 30,446 in Michigan, 10,910 in Minnesota, 8,748 in Wisconsin, and 5,944 in Illinois.

Of the whole number of English extraction, 335,947, or 49.52 per cent, were found in the North Central division, of which very nearly one-half were in Michigan alone, and 260,875, or 38.45 per cent, in the North Atlantic division.

The foregoing table applies only to persons born in Canada and Newfoundland of English or French extraction, and does not present, therefore, a complete showing of the English and French Canadian elements of our population at the time the census was taken in 1890, inasmuch as it does not comprehend those persons who were born in the United States or elsewhere who had either one or both parents of English or French Canadian extraction. The table on the following page gives the whole number of each element, classified according to the number having both parents of English or French Canadian extraction, or one parent only, the other parent having been born either in the United States or in some foreign country other than Canada or Newfoundland.

NUMBER OF WHITE PERSONS HAVING EITHER ONE OR BOTH PARENTS BORN IN CANADA AND NEWFOUNDLAND OF ENGLISH OR FRENCH EXTRACTION: 1890.

From this table it appears that the whole number of the French Canadian element in this country in 1890, so far as it could be determined through the medium of the census, was 537,298, while that of the English Canadian element (including Newfoundland) was 1,163,645. There is an unavoidable duplication in this table of 6,930 white persons having both parents born in Canada, one parent being of English extraction and the other parent being of French extraction. This duplication is small, however, as compared with the whole number of each element and has no bearing upon this discussion.

Of all the persons of French Canadian parentage, 442,041 had French Canadian fathers and mothers, 55,609 had French Canadian fathers only, and 39,648 had French Canadian mothers only. Of the whole number of English Canadian parentage, 503,266 had English Canadian fathers and mothers, 321,968 had English Canadian fathers only, and 338,411 had English Canadian mothers only.

The French Canadian element is largely confined to the North Atlantic division, 387,580 out of a total of 537,298, or very nearly three-fourths of their entire number, having been found in the states comprising this division. Considerable numbers were also found in the border states of the North Central division, the total for the division being 137,168. In the Western division there were 10,963 persons of French Canadian parentage, while in the South Central and South Atlantic divisions this element was found in small numbers only.

The English Canadian element is more evenly divided between the North Atlantic and North Central divisions, the larger proportion having been found in the latter division, while in the Western division there were over 100,000 persons of this extraction, and in the South Central and South Atlantic divisions about 23,000 persons.

In the Canadian census taken in 1891 an attempt was made to ascertain the number of French Canadians and French Acadians in the several provinces of the Dominion. The following statement relative to this inquiry is taken from the official report of that census:

* * * Each person who was asked the other questions in the census schedules, was also asked if he or she was a French Canadian (or Canadian French), or a French Acadian (or Acadian French) and the answers given were noted in these columns by the enumerators.

It has been claimed, however, with much appearance of reason, that the column headed "French Canadians" does not show the number of persons of French origin in Canada; that in the case of Acadians in the Maritime Provinces and the Half-Breeds of Manitoba and the Northwest Territories, the question was misunderstood and that in the Province of Ontario owing to various causes, many persons of French Canadian origin have not been so enumerated.

This fact is here noted so that persons, using the results published, may not be misled by supposing that the number of persons of French Canadian origin has been ascertained with precision or that the actual increases or decreases are such as a comparison with former census returns might seem to show.

The answers given to the enumerators have been correctly compiled and placed before the public.

The number of French Canadians returned in the Canadian census is given in Table 3 of their census report, and shows that out of a total of 4,833,239 persons, 1,404,974, or 29.07 per cent, were reported as French Canadians. In the United States census in 1890 the French Canadian element constituted 31.59 per cent of all the persons of Canadian extraction, including English and French.

It can not be claimed, of course, that the actual number of persons of French Canadian extraction in this country in June, 1890, as opposed to those of English Canadian extraction, was ascertained by the census, but it is believed that a careful study of the figures given herein will demonstrate the substantial accuracy of the enumeration in this respect. It represents the first attempt in the United States census to present these classes separately, and the results can be assumed to be at least fairly approximate.

Very respectfully,

CARROLL D. WRIGHT,
Commissioner of Labor in charge.

THE SECRETARY OF THE INTERIOR.
